Progress on equality between women and men in 2011

1. Introduction

In 2011, hit by a financial, economic and social crisis, the everyday lives of many European citizens, men and women, have been profoundly changed and the European Union is still facing one of its greatest challenges. The crisis and the responses to the crisis have had different impacts on women and men. As there is high pressure to fight the economic downturn, progress towards gender equality risks being considered as an objective that can be postponed. However, the equal treatment of women and men should be understood as contributing to economic success.

The present Report on progress on equality between women and men is a part of the Strategy for equality between women and men (2010-2015)¹. For the first time, this year it is annexed to the Communication on the Application of the EU Charter of Fundamental Rights. It provides an overview of the performance and activities organised at EU level in 2011 in the five areas of the Strategy namely: equal economic independence; equal pay for equal work and work of equal value; equality in decision-making; dignity, integrity and ending gender-based violence, and gender equality in external action policy. The following dimensions are emphasised:

- the economic and business case for gender equality,
- the efforts made to promote gender equality in the follow-up to the Europe 2020 strategy,
- the consequences of the crisis and recovery measures for women and gender equality,
- the advantage of tackling the gender pay gap at EU level, both for economic growth and meeting poverty targets,
- the economic case for promoting a balanced representation of women and men in economical decision-making,
- the human and economic costs of violence,
- the EU's clear commitment to gender equality when dealing with third countries and international organisations.

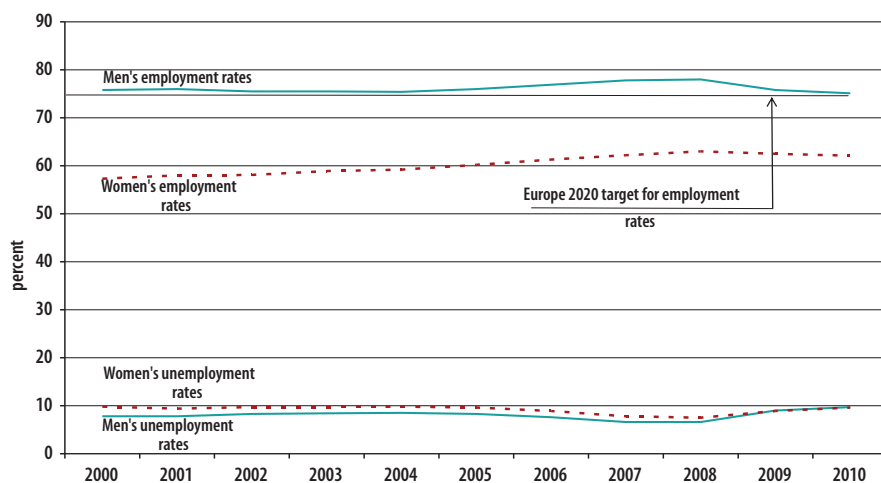

In what follows, these aspects are illustrated by examples of actions carried out at EU level and by Member States individually. The report also provides the most recent EU comparable statistics enabling an overview of the situation for women and men, the changes occurring over time, and remaining gender gaps in the European Union.

¹ COM(2010) 491 final.

2. Equal economic independence

With an employment rate reaching 75.1% for men and 62.1% for women² (Figure 1), it is broadly agreed that the EU can only reach the Europe 2020 headline target (75% of the population aged 20-64 should be employed by 2020) if there is a clear commitment to gender equality. Twelve EU Member States³ have already reached the target which has been set for male employment; however, when it comes to women, the vast majority of Member States have still not reached the 75% target.

Figure 1 – employment and unemployment rates (women and men aged 20-64) in EU Member States – 2000-2010

Source: Eurostat, Labour Force Survey (LFS), annual averages.

Moreover, if employment is measured in full-time equivalent⁴, figures show that, in several countries, less than half of the female workforce is employed. The availability of childcare services seems to play an important role (Figure 2) in determining these figures.

Employment rates of migrant women are not only substantially lower than the average employment rate, but are also lower than the employment rates of migrant men. The latter is what motivated the Commission, in its European Agenda for the Integration of Third-Country

² Eurostat 2010.

³ Sweden, Denmark, Netherlands, Germany, Czech Republic, Cyprus, Luxembourg, Malta, Austria, Portugal, UK, Greece.

⁴ Eurostat defines Full Time Equivalent (FTE) as a unit to measure employed persons in a way that makes them comparable although they may work a different number of hours per week. The unit is obtained by comparing an employee's average number of hours worked to the average number of hours of a full-time worker. A full-time person is therefore counted as one FTE, while a part-time worker gets a score in proportion to the hours he or she works. For example, a part-time worker employed for 20 hours a week where full-time work consists of 40 hours, is counted as 0.5 FTE.

Figure 2 – Female employment and coverage of childcare services

Source: EU-silc 2009, LFS 2010

Nationals, to call on Member States to address the specific needs of migrant women, promote their participation in the labour market and strengthen their economic independence⁵.

2.1. Second earners

In 2011, the EU launched the **first European Semester** and adopted its first Annual Growth Survey⁶, anchored in the Europe 2020 Strategy. It highlighted the worryingly low labour market participation rate of **second earners** (the spouse who earns less in two-earner couples). Indeed, in many Member States, financial disincentives such as tax and benefit systems combined with excessive childcare costs make it more attractive for the spouse with relatively lower earnings (who tend in general to be women, as can be seen in Figure 3) to choose between either inactivity or limited activity. The labour supply of spouses is interconnected and married women's decision to enter the labour market is often influenced by the total income of the household. As a result, women may enter or leave the workforce depending on family income needs. They are consequently more sensitive to policies affecting their participation in the labour market than policies addressing hours of work.

On 7 June 2011, in the context of the Europe 2020 Strategy, the Commission made country-specific suggestions for Council recommendations⁷. The Commission, when addressing Member States, placed the emphasis on taking the necessary measures in order to:

⁵ COM(2011) 455 final: European Agenda for the Integration of Third-Country Nationals.

⁶ COM(2011)11 final.

⁷ In accordance with Article 121 and 148 of the TFEU.

Figure 3 – Secondary and primary earners in Europe.
Percentage distribution of couples by share of female earnings, 2009*

* Woman earns less/more than man if her income is below 45% / above 55% of the joint income in the couple. Only couples with at least one working partner are considered. Couples in which at least one partner is self-employed or retired are excluded. Source: Bettio and Verashchagina, University of Siena, using EU-SILC 2009, income data for 2008.

- promote a reconciliation of work and private life by providing available and affordable childcare services,
- enable access to more flexible working arrangements,
- establish adequate tax and benefit systems in order to enhance female participation rates.

The Commission took stock of the progress made when implementing country specific recommendations, first at EU level in the Annual Growth Survey 2012 adopted in November 2011⁸, and then for each Member State in the set of guidelines for next year.

2.2. Pensions

According to a German study⁹ the gender pension gap in Germany is 59.6%, meaning that women receive on average 59.6% less individual pensions than men (i.e. excluding derived entitlements like survivor's pension). For the EU-15 the same study reveals a gap ranging between 16.8% and 46.4% (including derived entitlements).

When pension systems were initially developed, men spent a lifetime in the labour market and women mostly stayed home. The resulting income inequality in pensions was addressed by allowing wives to draw on their husbands' contributions. Over recent decades, women have entered the labour market in great numbers. However, inequalities remain and those have an impact on the adequacy of their pensions. Women are more likely than men to be outside the labour market at any age, to work part-time or under atypical contracts. Career breaks often lead to a reduction in lifetime earnings¹⁰ and on average women earn less than men. For all these reasons, women pensioners typically have lower pension benefits than male pensioners.

Demographic changes in Europe (an ageing population and a shrinking working population) and the financial and economic crises have created a major challenge for the future of pension systems. An important trend in recent pension reforms in Member States is to try and improve the financial sustainability of pensions systems by tightening the link between contributions and benefits in earnings-related pension schemes. This is done mainly through the lengthening of contribution periods required to qualify for a full pension and by changing the reference for the calculation of benefits from "best years" to lifetime earnings. As a consequence, pension benefits will increasingly depend upon the workers' entire career.

In parallel, the gender pay gap leads to negative consequences on the reference salary generally used when the statutory pension is calculated. This impedes women from contributing to complementary retirement savings.

2.3. Reconciliation between work and private life

Reconciling work, family and private life is still a great challenge for many European women. The labour market participation of mothers is 12.1 percentage points lower than that of women without children, while the rate for fathers is 8.7 percentage points higher than that for men without children. There was limited progress in the negotiations following the proposal for a Directive amending Directive 92/85/EEC (**Pregnant Workers Directive**). The European Parliament, in its first reading report adopted in 2010, proposed – among other things – to raise the length of maternity leave up to 20 fully paid weeks and to introduce a two weeks fully paid paternity leave. This has brought many Member States to oppose the proposal. The Council has not yet adopted its first reading position.

9 Gender Pension Gap. Developing an indicator measuring fair income opportunities for women and men. German Federal Ministry for Families, Elderly, Women and Youth, January 2012.

10 Projections carried out by DG ECFIN estimated that the effect of a three-year long career break for childcare on pension benefits is much larger than the effect of a three-year long unemployment spell in a few Member States.

Reconciliation between work and care obligations not only concerns parents of small children. Challenges are noticeable through the life-cycle. In some Member States, elderly workers retire earlier so as to help their adult children in raising their families. Women with grand-children and elderly relatives therefore require special attention.

The Council conclusions on the “reconciliation of work and family life as a precondition for equal participation in the labour market”¹¹ were adopted under the Polish Presidency, in the framework of the Review of the Implementation of the Beijing Platform for Action. In this context, a report¹² prepared by the European Institute for Gender Equality (EIGE) underlines that increases in childcare services and fathers’ take-up of parental leave have a positive bearing on the labour supply for main carers, who are usually women. Both measures promote a better share of gender-equal unpaid care work. However, changes in the labour-market (from industry to services) and short-term macroeconomic developments may increase the share of female primary earners.

3. Equal pay for equal work and work of equal value

The pay gap between women and men is slowly narrowing but remains high. Figure 4 shows that on average, women earn 16.4%¹³ less than men for every hour worked with considerable variations among Member States. The gender pay gap (GPG) is caused by multiple factors¹⁴, such as labour market segregation and differences in work patterns. Differences in educational choices and biased evaluation and pay systems also play a role.

The EU-wide information campaign on the GPG launched in March 2009 was continued throughout 2011. Building on previous achievements, results and the experience gained during the two previous years of implementation, the current phase of the campaign further develops awareness-raising activities. The first European Equal Pay Day took place on 5 March 2011. The date marked the 64 days women had to work more in 2010 to earn a man’s average annual pay. The European Equal Pay Day will be held each year and the date will change according to the latest GPG figure. In 2012, Equal Pay Day fell on 2 March. The European Commission is planning a two-year communication campaign aimed at attracting and retaining more women in scientific careers, at showing them that they can have a successful career and that science can benefit from a higher participation of women.

In 2011, Bulgaria passed a law amending the Labour Code. The law foresees equal rights and opportunities for distance workers and gives a legal definition of distance work.

The Netherlands introduced a quality mark to reward companies which are ahead in the implementation of flexible work arrangements.

In Austria, since 1 March 2011 companies are obliged to present an income report. Since 1 January 2011 there is an obligation to indicate the minimum wage and, where appropriate, the possibility of overpayment in job announcements. A consequence of contravening these regulations is a first warning fine of up to 360 €. A Salary Calculator¹⁵ was made available to the public on the website of the minister of women and civil service to compare the salary for women and men on average.

11 Annexed to Council conclusions (7166/11).

4. Equality in decision-making

The equal participation of women and men in decision-making processes and positions is a prerequisite for the advancement of women and the achievement of substantive gender equality. It is recognised as a necessary basis for effective democracy and good governance in all fields. Even though progress has been made, the underrepresentation of women continues to be an area of concern in many EU Member States. The situation varies between them and is very often worse in the corporate world.

4.1. More women on corporate boards as an economic and business imperative

In January 2012, only 13.7% of board seats of EU Member States' largest publicly listed companies¹⁶ were filled by women (Figure 5). The pace of progress has been slow, though there has been an improvement of 1.9 percentage points compared to the EU average in 2010. The underrepresentation of women in leadership positions constitutes an untapped potential source of highly qualified human resources as evidenced by the discrepancy between the high number of female graduates and their absence from top-level positions. The Europe 2020 Strategy for smart, sustainable and inclusive growth leans on knowledge, competences and innovations, i.e. human capital. One of the ways of improving Europe's competitiveness is the equal

¹⁶ Source: European Commission database on women and men in decision-making. The data on companies cover the largest (by market capitalization) nationally registered constituents of the blue-chip index maintained by the stock exchange in each country. In countries with unitary (one-tier) systems, the board of directors is counted (including non-executive and executive members). In countries with two-tier systems, only the supervisory board is counted.

representation of women and men in economic decision-making positions, which contributes to a more productive and innovative working environment and helps improve performance. In addition, there is an increasing body of research showing that gender diversity pays off and that there is a positive correlation between women in leadership and business performance¹⁷.

Figure 5 – Share of women and men members of the highest decision-making body of the largest publicly listed companies – 2012

Source: European Commission, database on women and men in decision-making. Data were collected in January 2012. The list of the largest publicly quoted companies is based for each country on current membership of blue-chip index. In countries for which the blue-chip index includes a small number of companies (for instance LU, SK), at least the 10 largest companies were covered.

Moreover, a large majority of European citizens (88%) believe that, given that women are equally competent, they should be equally represented in positions of leadership and 75% are in favour of legislation that would ensure a more balanced representation between women and men (under the condition that qualification is taken into account without automatically favoring one of either gender)¹⁸.

2011 was an important year for gender equality in corporate boardrooms. **Vice-President Reding**, Commissioner for Justice, Fundamental Rights and Citizenship challenged business leaders to increase women’s presence on corporate boards by self-regulation. The goal is 30% women on the boards of the major European companies in 2015 and 40% by 2020. All EU publicly listed companies were asked to sign the “Women on the Board Pledge for Europe”¹⁹ and to develop their own ways of getting more women into top jobs. A number of **ministers** and organisations supported this call for action, encouraging national listed companies to make more efforts to increase women’s representation on their boards by signing the Pledge.

¹⁷ Catalyst, McKinsey & Company, Lord Davies report, etc.

¹⁸ Special Eurobarometer 376 – Women in decision-making positions, September 2011.

¹⁹ Available at: http://ec.europa.eu/commission_2010-2014/reding/womenpledge.

The **European Parliament** supported the Commission's approach through a resolution adopted in July 2011²⁰. In addition, four EU Member States (France, the Netherlands, Italy and Belgium) have adopted binding measures to improve the situation. Other Member States have encouraged self-regulatory measures.

In March 2012, the Commission published a report²¹ showing that, one year after the call to action, limited progress had been made towards increasing the number of women on company boards. To identify appropriate measures for addressing the persistent lack of gender diversity in boardrooms of listed companies in Europe, the Commission launched a public consultation²² which will serve to gather views on possible action at EU level, including legislative measures, to redress the gender imbalance on company boards. The public consultation will run until 28 May 2012. Following this input, the Commission will take a decision on further action later in 2012.

4.2. Gender balance in political decision-making: more progress is needed

Data shows that there has been progress made towards better gender balance in **parliaments** at European and national levels. The **European Parliament** has a better gender composition (35% women and 65% men) than national and regional parliaments (24% and 32% women respectively).

From 2005 to 2011, the proportion of women members in the **Lower/Single houses of national parliaments** around the EU has risen steadily, albeit slowly, from 22% to just under 25%. Only **Belgium, the Netherlands, Finland** and **Sweden** have more than 40% of women in their parliaments and 19 Member States still have less than the critical mass of 30%

Figure 6 – Women and men in national Parliaments (single/lower houses) – 2011

Source: European Commission, database on women and men in decision-making. Data were collected in the last quarter 2011.

20 European Parliament resolution of 6 July 2011 on women and business leadership (2010/2115(INI)).

21 http://ec.europa.eu/justice/gender-equality/files/women-on-boards_en.pdf

22 http://ec.europa.eu/justice/newsroom/gender-equality/opinion/120528_en.htm

of women in their parliaments (Figure 6). Positive developments in 2011 include the great progress made in **Slovenia**, where women's representation doubled from around 16% to 32% and in **Poland** where women now account for around 24% of parliamentarians (+ 4 percentage points). Part of the progress can be pointed to quota legislation adopted in both countries and strong campaigning from women's organisations.

There has been an improvement in the gender composition of EU Member States **governments** over time, but the pace of change remains slow in many countries. On average, the share of women senior ministers²³ is only around 24%²⁴.

Inside the EU, only **Sweden** achieved parity in government. **Austria** and **Finland** have more than 40% women senior ministers. By contrast, the figure is under 10% in the governments of **Estonia, Slovenia, Czech Republic** and **Greece**. In **Hungary**, there are no female senior ministers in the government.

5. Dignity, integrity and ending gender-based violence

5.1. Ending gender-based violence

Gender-based violence is a major violation of fundamental rights and entails a high cost for society. The fact that there is no comparable data on violence against women in the different Member States increases the difficulty of addressing this phenomenon. Voices have been raised to warn against the potential threat the financial crisis represents as it may sweep away much of the progress achieved in terms of public expenditure for supporting victims of violence.

An important step towards the objective of ending gender-based violence was the adoption on 18 May 2011 of a package of measures aimed at strengthening the rights of victims of crime. The package consists of a proposal for a horizontal Directive establishing minimum standards on the rights, support and protection of victims of crime²⁵, a proposal for a Regulation on the mutual recognition of civil law protection measures²⁶ (complementing the Directive on the European Protection Order) and a Communication setting out the Commission's position on actions in relation to victims of crime.

This is a general and comprehensive reform package which applies to all victims; including women. It provides a range of measures that should be put in place to ensure that victims receive proper treatment from the moment they report a crime to the final outcome of criminal

The most recent quota law for gender balance in politics is from Poland. It was passed in January 2011 and stipulates that women candidates should make up at least 35% of all electoral lists. The sanction for not complying with this requirement is a refusal from the list. The women's movement played a crucial role in getting the law passed.

Member States are taking action against violence against women (VAW). In **France**, the third action plan against VAW for the first time condemns gender-based workplace violence, rape and sexual assault and the use of prostitution. Many countries have also initiated campaigns: in **Cyprus**, 365 posters depicting all forms of VAW were showed; **Denmark**, inspired by **Spain**, introduced a film with well-known Danish football players spreading the message of eliminating VAW; the **Greek** campaign focused on a telephone line for victims; the slogan of the **Spanish** campaign was "Don't skip the signals. Choose life".

²³ Members of the government who have a seat in the Cabinet or Council of Ministers.

²⁴ See figures from p. 104.

²⁵ COM(2011) 275 final.

²⁶ COM(2011) 276 final.

proceedings. A number of measures and provisions will have a positive impact, especially on women suffering from different forms of violent and sexual crime.

For example, the proposal for a Directive puts in place a mechanism based on an individual need assessment to determine whether a victim is in a situation of specific vulnerability and needs special protection. Typically, women who are victims of domestic and sexual violence will be considered vulnerable because of the nature of the crime they have suffered or their relationship to / dependence on the offender. In those cases special protection measures will be available during their participation in criminal proceedings to ease their difficulties during interviews, hearings and trial. Negotiations between the co-legislators are ongoing.

Another measure that will benefit many women is the mutual recognition of protection measures, for example measures which aim to protect a person from harassment, stalking and other forms of indirect coercion. It is important that protection measures issued in one Member State can be easily and speedily be recognised in another Member State. In this way, women do not lose their protection from a violent partner if they move or travel and they don't have to go through heavy formalities. To this end, the proposal for a Regulation relating to the mutual recognition of civil law protection measures will complete the proposal for a Directive on the mutual recognition of criminal law protection measures. Negotiations on the proposal for a Regulation have started under the Polish Presidency and will continue under the Danish Presidency.

A Convention on preventing and combating violence against women and domestic violence²⁷ was adopted on 7 April 2011 in the framework of the Council of Europe. The Convention:

- introduces a comprehensive legal framework to prevent and criminalise all forms of violence against women, to protect victims and to punish perpetrators;
- promotes an integrated approach to violence prevention and victims' protection based on targeted measures according to the type of violence and specific needs along with the involvement and cooperation of all the relevant actors to create a safety net around the victim provided by specifically trained professionals;
- urges the justice system to be more responsive.

²⁷ Available at: <http://conventions.coe.int/Treaty/EN/Treaties/HTML/DomesticViolence.htm>

5.2. Health

Following the 2010 Women's Health report²⁸, the Commission presented a Men's Health report in 2011²⁹ showing that both men and women's perspectives should be taken into account in developing health policy. Although men's overall life expectancy in Europe as a whole is increasing (Figure 7), some Member States have seen a reversal of this trend in the past decade. Life expectancy is lower for men than for women across the EU, a difference that ranges from 11.2 years for Lithuania to 4.1 years in Sweden. A key message of the report is that there are high levels of premature morbidity and mortality in men, due to lifestyle choices and risk-taking behaviours. In all Member States, men who live in poor material and social conditions are likely to eat less healthily, exercise less, be overweight or obese, drink more alcoholic beverages and be more likely to smoke, engage in substance abuse (or drug abuse) and have more high-risk sexual behaviour than women. The report also concludes that a man's poorer knowledge and awareness of health issues underlines the need for targeted health information aimed at men.

²⁹ "The State of Men's Health in Europe", European Union, 2011.

6. Gender equality in external actions

The Gender Inequality Index was designed by the United Nations Development Programme (UNDP) to show the loss in human development due to inequality between women and men. It measures women's disadvantages in three dimensions: reproductive health, empowerment and the labour market³⁰. It shows that Norway, Australia and New Zealand have achieved the highest degree of gender equality and that **Ireland, The Netherlands, Sweden and Germany** are among the ten countries that score highest in the world. Indeed, the EU has been at the forefront of gender equality policy and has also contributed to promoting gender equality beyond its borders.

In January 2011, the **Human Rights and Democracy Department** of the European External Action Service (EEAS) was established. The Department strives for consistency between internal and external policies. This is of particular relevance in the field of human rights and as regards the promotion of gender equality and the empowerment of women. It shows how EU achievements related to gender equality and women's empowerment have a global dimension. Specific gender focus points have been selected in more than seventy EU-delegations around the world and a growing number of delegations in partner countries are engaging in dialogue with a strong gender equality component. For instance, in India, 40% of the Multiannual Indicative Programme is allocated to education with a strong gender equality component. The EU continues to actively promote women's human rights through human rights dialogues and consultations with partner countries, such as the **African Union, the EU candidate countries, Canada, China, Indonesia, Japan, the Republic of Moldova, New Zealand, South Africa, Turkmenistan and Uzbekistan**.

Implementing the *EU Guidelines on Violence against Women and Girls and Combating All Forms of Discrimination against them*³¹ is an important part EU Delegations' mission. By the end of 2010, more than 130 delegations had reported on the guidelines, a vast majority having identified concrete actions to be implemented in their countries of residence. The EEAS continues to contribute to their implementation through the thematic European Instrument for Democracy and Human Rights (EIDHR) programme. From October 2011 until January 2012, the EEAS will launch regional campaigns about women's participation in politics (North Africa and Middle East) and forced/early marriages (Asia).

Gender Equality is essential for growth and poverty reduction and is key to reaching the Millennium Development Goals. This is why the EU development policy contains a strong commitment to accelerating progress in this important area. For the period 2007-2013, the EU external co-operation in the field of gender equality and women empowerment is financed not only – as cross cutting issues – through geographical instruments (European Development

³⁰ The index excludes aspects of decision-making in politics, information on employment, additional burdens (care and housekeeping), asset ownership and VAW.

³¹ General Affairs Council of 8 December 2008.

Fund, Development Cooperation Instrument and European Neighbourhood and Partnership Instrument) at national and regional level but also by thematic instruments, such as the “Investing in People” programme and the “Instrument for Democracy and Human Rights”. The focus is on gender equality and women empowerment, and the aim is to achieve equal rights (political, economic, employment, social and cultural right) for all; equal access to and control over resources for women and men; equal opportunities to achieve political and economic influence for women and men. The first report on the implementation of the Action Plan on Gender Equality and Women’s Empowerment³² was published in 2011. It gives a clear idea of what is being done in partner countries by the EU Delegations and the Member States to promote gender equality and women’s empowerment.

The priority theme of the 55th session (2011) chosen by the **United Nations Commission on the Status of Women** (CSW) was “*Access and participation of women and girls to education, training, science and technology, including for the promotion of women’s equal access to full employment and decent work*” and conclusions³³ were agreed that reflect the EU gender equality *acquis*.

7. Horizontal issues

The Strategy for Equality between women and men commits the Commission to implementing gender mainstreaming as an integral part its policy making. It stipulates that the next EU Multiannual Financial Framework (MFF) will provide the support necessary to implement the actions foreseen in the Strategy after 2013. In May 2011, the Advisory Committee on equal opportunities between women and men adopted an opinion on key recommendations for the future funding programmes covering the period of 2014–2020.

The Commission has adopted legislative proposals for the future budget programs. Gender equality is included in the Rights and Citizenship programme³⁴. The objective of this program is to promote and protect the rights of persons and in particular the principles of non-discrimination and equality between women and men. The proposal will be discussed with the Council and with the European Parliament in 2012.

Graphs and tables

This part gives an overview of the situation of women and men, its evolution over time, and remaining gender gaps in the European Union.

Given the importance of a broad approach to gender equality, indicators have been chosen according to two main criteria: their relevance in covering aspects of the lives of women and men, and the availability of comparable and reliable data. Some indicators have been developed in the framework of the annual review of the Beijing Platform for Action and others by the Commission for monitoring progress in different policy areas, such as employment, social inclusion, education and research. The Europe 2020 indicators are also proposed where sex disaggregated statistics are available. If nothing else is mentioned, the source of the data is Eurostat.

Progress on equality between women and men in 2011

Luxembourg: Publications Office of the European Union
2012 — 44 pp. — 21×21 cm

ISBN-13 978-92-79-23907-6

doi: 10.2838/8258

The European Union has enshrined gender equality as a fundamental right. The Staff Working Document on Progress on Equality between Women and Men in 2011 presents recent developments in gender equality and statistics in all fields covered by the Strategy for equality between women and men (2010-2015): equal economic independence; equal pay for equal work and work of equal value; equality in decision-making; dignity, integrity and an end to gender-based violence; and gender equality in external actions.
